Fw: Rozol incident  
Nicholas Mastrota to: Norman Spurling

08/10/2009 03:37 PM

Norman,

I am not sure if I forwarded this to you or not. It is an update to incident I020607-001. It duplicates some information reported in I020713-001. I also have an email update report from the National Wildlife Health Center that discusses this incident. I will forward that to you shortly.

Nick

Subject: Rozol

Nick,

Logan County, KS

I have been unable to reach Ron Klataske (Audubon) for precise details, but the one lab report that was forwarded to you via a March 25 email from Nancy was for a badger. A great horned owl and a ferruginous hawk were also submitted, but we don't have lab data back yet. In addition, there is one golden eagle and 2 ferruginous hawks that are being handled by law enforcement and moving a bit slower. When we get information back on any of these raptors, if it is relevant, we will send the information to Nancy and rely on her to pass it on to you. As far as the type of rozol, I believe it is rozol prairie dog bait (0.005% chlorophacinone). It is a 24(c) supplemental label, EPA SLN No. KS-070003, EPA Registration No. 7173-244. All of these mortalities were in Logan County, Kansas, which is also a black-footed ferret reintroduction site.

Thanks for your interest.
